

## Comfortable Ambience of Well-being

The laser centre operates under the direction of an experienced doctor. Thanks to the direct connection of the laser centre with the Capiro Klinik im Park, the Vein Treatment Centre of North Rhine-Westphalia, you get the benefit of 25 years of medical competence of a specialist clinic - together with the optimal all-round care for the particular requirements of dermatological laser medicine.

Exploit the advantages of the latest technology combined with many years of experience, and also enjoy the beautiful ambience during your stay: For example the wonderful park from which the clinic derives its name, as also the outstanding cuisine, which can compare favourably with any restaurant.

The positive interaction of health and spiritual well-being is promoted here in every respect.

## How to get to the clinic

## Laser centre

## Treatment and course of the therapy

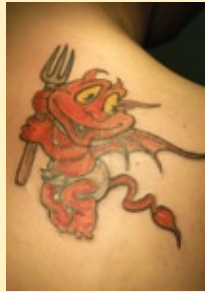

The laser centre of the Capiro Klinik im Park has been in existence since 10 years and has the state-of-the-art equipment in dermatological laser medicine. These modern laser systems are used successfully and very gently – even in cosmetic dermatology.

Other advantages of this proven technology: no anaesthesia and no scar formation, and other side effects are extremely rare if applied properly. And with the new IPL (Intense Pulse Light) technology, even ugly pigmentations or red capillaries in the sensitive face area can be removed gently.

Generally, laser treatment is trouble-free. We strive to keep the intervention as pain-free as possible by applying a local anaesthetic cream before the treatment, and cooling with ‚Cool-Packs‘ is also found to be pleasant. What is important is that during the treatment, the doctor providing the treatment and the patient must wear special protective glasses.

## The range of services of the laser centre

**Hair removal** - This treatment is particularly well suited for dark pigmented hair, but thanks to modern technology, can also be used for other skin types. We can determine whether this method is suitable for you in an onsite consulting session.

**Tattooing** - With modern lasers, tattoos can be made to disappear without any scars. The duration of the treatment depends on the colour used and the skin type. Black, blue and green shades come off more easily than red and yellow shades.

**Facial erythrosis, port-wine stains, pedunculated warts** - In the case of red capillaries in the face, very good results can be obtained after just one sitting. However, several sittings are required for removing port-wine stains. Even with children, it is possible to remove port-wine stains and haemangiomas with the laser - with cosmetically appealing results.

## The range of services of the laser centre

**Spider veins, pigmentation defects, haemangiomas, moles and senile warts** - The reddish-blue capillary formations in the legs (spider veins) as also senile freckles and summer freckles in the face can be removed in a manner that is very gentle on the skin. The surrounding tissue is not harmed.

**Smoothing out folds** - In „Skin-Resurfacing“, for example, the laser removes wafer-thin layers of skin without even a drop of blood being shed. The collagen fibres cohere together and become tighter again. We can determine whether this method is suitable for you individually in an on-site consulting session.
